

ACO Passavant – Lipumax

Case Study

Flavours, Hobart, Tas

TasWater has recently introduced a Commercial Compliance Program to help Tasmanian businesses improve the quality of wastewater discharge and become trade waste compliant. The program offers a no interest repayment scheme to help cover the cost of installing a compliant trade waste pre-treatment system.

Project Design Brief

Flavours Restaurant in Sandy Bay chose to become trade waste compliant and therefore install a pre-treatment device under the Commercial Compliance Program. However designers were challenged with the minimal outdoor space the restaurant had available.

ACO's Solution

- **Lipumax-P** 1500L in-ground grease trap

Benefits

- With a narrow oval shape, the Lipumax body has a small footprint, making it ideal for retrofit applications
- The grease trap body is made from durable polyethylene which provides excellent corrosion resistance properties
- Lipumax body units are also designed to resist hydrostatic forces generated from in-ground installations
